

DISCO Ediscovery

Find critical documents quickly with modern software for legal professionals

“With DISCO, we are more nimble and can get through large amounts of documents rapidly, so we can uncover the facts more quickly. DISCO is a best-in-class discovery platform and their team of professionals are true partners in helping us leverage technology to simplify the discovery process and remain focused on our client work.”

— Patrick Murphy, Partner

Quarles & Brady LLP

More documents, more problems: As data volumes continue to explode, ediscovery becomes increasingly time-consuming and unwieldy. Managing large cases usually requires using a series of cobbled-together tools to complete individual tasks from collection to production. Legal teams face unpredictable — and often unacceptably high — costs due to slow document review software, hidden fees, and ballooning data volumes.

Fast, intuitive, and intelligent, DISCO Ediscovery leverages cutting-edge cloud architecture and AI to help teams resolve cases faster with less risk and more control. Scaling from small investigations to some of the largest, most complex litigation today, our clients trust DISCO Ediscovery to help them get to the facts of the matter faster.

The DISCO magic

Powered by the most advanced cloud-native infrastructure available to ensure security, stability, and scalability, DISCO handles the largest cases with no degradation in speed or performance. DISCO provides the modern tools necessary for lawyers making sense of large document sets—including built-in analytics, email threading, and artificial intelligence (AI) enabled on every matter for no additional cost. And with early case assessment (ECA) and graduated pricing that is 100% cost-certain upon ingest, teams can create better, more accurate budgets.

Built to scale to any size

DISCO uses Amazon Web Services (AWS) to automatically scale in real time based on your need. No more waiting for servers while producing documents or searching hundreds of gigabytes of data. Our autoscaling is so powerful that over 80% of our productions take less than 30 minutes to run.

All-inclusive pricing scalable to your matter

To reduce the barrier for firms to choose superior technology, we offer graduated pricing based only on the size of your unexpanded data. Your flat monthly rate includes processing, imaging, OCR, advanced analytics, productions, and unlimited users to reduce overall costs and set clear expectations for your client. For large or long-running matters, DISCO offers special pricing while also keeping all work product and analytics.

Eliminate delays in working with your data

Upload your data directly into DISCO via our massive pipeline for data transfer with DISCO's proprietary High-Speed Uploader, with speeds over 180 GB per hour and 4 TB per day. When you load your data directly into DISCO, it begins processing automatically and is available for review within hours or minutes, not the days required by traditional ediscovery tools.

Faster time to evidence

Our lightning-fast search and view speeds in combination with our intuitive design and automatic email threading leads to a 23% improvement in review speed compared to legacy solutions. Reviewing just the most inclusive emails reduces the time to evidence by more than 36%.

Early Case Assessment (ECA)

With DISCO for ECA, you get access to simple pricing structures to make kicking off your case easy. Simply load your documents to begin using DISCO's powerful ECA tools — such as unlimited searching, filtering, analytics, document viewer, foldering, and limited tagging — to analyze the actual document (not just metadata) and determine which documents to delete and which to load into Ediscovery for review.

DISCO Review

With large data sets, meeting discovery deadlines is challenging. Leveraging our team of industry experts, AI, platform, and workflows, DISCO Managed Review consistently completes reviews 60% faster than the industry average with improved accuracy. In fact, we guarantee your review will be completed on budget and on time with superior results.
